| Quality Control Oligonucleotide synthesis is monitored base by base through trityl analysis | | | h trityl analysis to ensure | | | |
| | appro | priate coupling effici | ency. The oligo is subsequently pu | urified by affinity-solid | | |
| | phase | extraction. The ann | ealed RNA duplex is further analyz | zed by mass | | |
| | specti | rometry to verify the | exact composition of the duplex. | Each lot is compared to | | |
| | the pr | revious lot by mass s | pectrometry to ensure maximum | lot-to-lot consistency. | | |
| Components We offers pre-designed sets of 3 different target-specific siRNA oligo | | | NA oligo duplexes of | | | |
| | huma | human ASIC1 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes can | | | | |
| | be tra | nsfected individually | or pooled together to achieve kn | ockdown of the target | | |
| | gene, | gene, which is most commonly assessed by qPCR or western blot. | | | | |

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
