MVP siRNA (Human)

Catalog #	Source	Reactivity	Applications									
CRH6699	Synthetic	H	RNAi									
Description	siRNA to inhibit MVP expression using RNA interference											
Specificity	MVP siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed to knock down gene expression.											
Form	Lyophilized powder											
Gene Symbol	MVP											
Alternative Names	LRP; Major vault protein; MVP; Lung resistance-related protein											
Entrez Gene	9961 (Human)											
SwissProt	Q14764 (Human)											
Purity	> 97%											
Quality Control	Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.											
Components	We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of human MVP gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes can be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot.

Product Data Sheet

MVP siRNA (Human) - C	5 nmol x 1	5 nmol x 2
Negative Control	2.5 nmol x 1	2.5 nmol x 2
DEPC Water	1 ml x 1	1 ml x 2

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 µl of DEPC water to get a final concentration of 20 µM.

Plate	Final volume of medium	Final concentration of siRNA	siRNA (20 µM)	Lipofectamin 2000

		50 nM	1.25 µl	1 µl
		10 nM	0.25 µl	1 µl
