| Specificity      | Agom       | Agomir is chemically-modified double-strand miRNA mimics which can mimic         |   |  |  |  |
|                  | matu       | re endogenous miRNA  | after transfection into cells. They can up-regulate the     |  |  |  |
|                  | endo       | genous miRNA activity  | by utilizing the natural miRNA machinery. Our miRNA         |  |  |  |
|                  | agom       | ir is designed to mimic  | mature miRNAs, and chemically modified to increase          |  |  |  |
|                  | their      | stability and activity.  |   |  |  |  |
