Product Data Sheet

Western blot analysis of GEF H1 expression in SHSY5Y (A), mouse liver (B), mouse testis (C), rat spleen (D), rat testis (E) whole cell lysates. (Predicted band size: 111 kDa; Observed band size: 111 kDa)

Immunohistochemical analysis of GEF H1 staining in human breast cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
