cription siRNA to inhibit DOPEY1 expression using RNA interference					
DOPEY1 siRNA (Human) is a target-spe	cific 19-23 nt siRNA oli	go duplexes designed			
to knock down gene expression.

Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.					
			omponents We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of		
			human DOPEY1 gene. Each vial contains 5 nmol of lyophilized siRNA. The dupl		
			can be transfected individually or pool	ed together to achieve	knockdown of the
target gene, which is most commonly assessed by qPCR or western blot.

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
