## RAB23 siRNA (Human)

Reactivity	Applications				
ic H	RNAi				
escription siRNA to inhibit RAB23 expression using RNA interference					
RAB23 siRNA (Human) is a target-spec	ific 19-23 nt siRNA oligo	o duplexes designed to			
knock down gene expression.					
Lyophilized powder					
RAB23					
Alternative Names Ras-related protein Rab-23					
Entrez Gene 51715 (Human)					
SwissProt Q9ULC3 (Human)					
> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to					
			the previous lot by mass spectrometry	y to ensure maximum lo	t-to-lot consistency.
			Components We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of human RAB23 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes		
can be transfected individually or pooled together to achieve knockdown of the					
target gene, which is most commonly assessed by qPCR or western blot.

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
