## **APOM siRNA (Human)**

| Catalog # Source Reactivity Applications   CR11019 Synt+ic H RNAi   Description siRNA to inhibit APOM expression using RNA interference   Specificity APOM siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed to knock down gene expression.   Form Lyophilized powder   Gene Symbol APOM   Alternative Names G3A; NG20; Apolipoprotein M; Apo-M; ApoM; Protein G3a   Entrez Gene 55937 (Human)   SwissProt Olgonucleotide synthesis is monitored base by base through trityl analysis to ensure appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.   Components We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of human APOM gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes can be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot.   Components APOM siRNA (Human) - A 5 nmol x 1 5 nmol x 2 |               |           |   |                        |                  |                       |  |

## **Product Data Sheet**

| APOM siRNA (Human) - C | 5 nmol x 1   | 5 nmol x 2   |  |
|------------------------|--------------|--------------|--|
| Negative Control       | 2.5 nmol x 1 | 2.5 nmol x 2 |  |
| DEPC Water             | 1 ml x 1     | 1 ml x 2     |  |

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
