CCDC71 siRNA (Human)

e Reactivity	Applications	
etic H	RNAi	
Description siRNA to inhibit CCDC71 expression using RNA interference		
CCDC71 siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed		
to knock down gene expression.		
Lyophilized powder		
CCDC71		
Alternative Names Coiled-coil domain-containing protein 71		
Entrez Gene 64925 (Human)		
SwissProt Q8IV32 (Human)		
> 97%		
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure		
appropriate coupling efficiency. The oligo is subsequently purified by affinity-so		
phase extraction. The annealed RNA	duplex is further analyze	ed by mass
spectrometry to verify the exact composition of the duplex. Each lot is compared		
the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.		
We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of		
human CCDC71 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes		
can be transfected individually or po	oled together to achieve	knockdown of the
target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
