Description siRNA to inhibit MRPL34 expression using RNA interference					
MRPL34 siRNA (Human) is a targ	et-specific 19-23 nt siRNA oligo duplexes de	signed			
to knock down gene expression.					
Lyophilized powder					
MRPL34					
Alternative Names 39S ribosomal protein L34 mitochondrial; L34mt; MRP-L34					
64981 (Human)					
SwissProt Q9BQ48 (Human)

Oligonucleotide synthesis is monitored base by base through trityl analysis to ensu					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
