tic H	RNAi				
escription siRNA to inhibit CRELD2 expression using RNA interference					
CRELD2 siRNA (Human) is a target-spe	cific 19-23 nt siRNA olig	o duplexes designed to			
knock down gene expression.					
Lyophilized powder					
CRELD2					
cysteine-rich with EGF-like domain protein 2

> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to					
			the previous lot by mass spectrometr	y to ensure maximum lo	t-to-lot consistency.
			We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of		
human CRELD2 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes					
can be transfected individually or poc	led together to achieve	knockdown of the			
target gene, which is most commonly assessed by qPCR or western blot.

Negative Control	2.5 nmol x 1	2.5 nmol x 2
DEPC Water	1 ml x 1	1 ml x 2

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
