Quality Contr	ol Oligo	Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure				
	appro	priate coupling effici	ency. The oligo is subseque	ently purified by affinity-solid		
	phase	extraction. The anne	ealed RNA duplex is furthe	r analyzed by mass		
	spect	spectrometry to verify the exact composition of the duplex. Each lot is compared to				
	the p	revious lot by mass sp	pectrometry to ensure mag	ximum lot-to-lot consistency.		
Components	We of	We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of				
	huma	human FAM110B gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes				
	can b	can be transfected individually or pooled together to achieve knockdown of the				
	target	target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
