| Quality Contr | ol Oligor | Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure | | | |
| | appro | priate coupling efficie | ncy. The oligo is subseque | ently purified by affinity-solid | |
| | phase | phase extraction. The annealed RNA duplex is further analyzed by mass | | | |
| | specti | spectrometry to verify the exact composition of the duplex. Each lot is compared to | | | |
| | the pr | evious lot by mass spe | ectrometry to ensure max | timum lot-to-lot consistency. | |
| Components | We of | We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of | | | |
| | huma | n GPRIN1 gene. Each v | ial contains 5 nmol of lyc | philized siRNA. The duplexes | |
| | can be | e transfected individua | lly or pooled together to | achieve knockdown of the | |
| | target | target gene, which is most commonly assessed by qPCR or western blot. | | | |

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
