RNF32 siRNA (Human)

Reactivity	Applications				
ic H	RNAi				
escription siRNA to inhibit RNF32 expression using RNA interference					
RNF32 siRNA (Human) is a target-spec	ific 19-23 nt siRNA oligo	o duplexes designed to			
knock down gene expression.					
Lyophilized powder					
RNF32					
Alternative Names RING finger protein 32					
Entrez Gene 140545 (Human)					
SwissProt Q9H0A6 (Human)					
> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to					
			the previous lot by mass spectrometry	v to ensure maximum lo	t-to-lot consistency.
			We offers pre-designed sets of 3 differ	ent target-specific siRN	A oligo duplexes of
human RNF32 gene. Each vial contains 5 nmol of lyophilized siRNA.					
can be transfected individually or pooled together to achieve knockdown of the					
target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
