DSG4 siRNA (Human)

Reactivity	Applications				
tic H	RNAi				
cription siRNA to inhibit DSG4 expression using RNA interference					
DSG4 siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed to					
knock down gene expression.					
Lyophilized powder					
Gene Symbol DSG4					
ternative Names CDHF13; Desmoglein-4; Cadherin family member 13					
147409 (Human)					
Q86SJ6 (Human)					
> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid					
phase extraction. The annealed RNA duplex is further analyzed by mass					
spectrometry to verify the exact composition of the duplex. Each lot is compared to					
the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.					
mponents We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of					
human DSG4 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes car be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot. Component 15 nmol 30 nmol

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
