# TMEM65 siRNA (Human)

Catalog # Source Reactivity Applications

CRJ5822 Synthetic H RNAi

**Description** siRNA to inhibit TMEM65 expression using RNA interference

Specificity TMEM65 siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed

to knock down gene expression.

Form Lyophilized powder

Gene Symbol TMEM65

Alternative Names Transmembrane protein 65

Entrez Gene 157378 (Human)

SwissProt Q6PI78 (Human)

**Purity** > 97%

Quality Control Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure

appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid

phase extraction. The annealed RNA duplex is further analyzed by mass

spectrometry to verify the exact composition of the duplex. Each lot is compared to

the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.

**Components** We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of

human TMEM65 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes

can be transfected individually or pooled together to achieve knockdown of the

target gene, which is most commonly assessed by qPCR or western blot.

### **Directions for Use**

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μl of DEPC water to get a final concentration of 20 μM.
