CAMSAP1 siRNA (Human)

e Reactivity	Applications				
tic H	RNAi				
Description siRNA to inhibit CAMSAP1 expression using RNA interference					
CAMSAP1 siRNA (Human) is a target-s	pecific 19-23 nt siRNA o	ligo duplexes designed			
to knock down gene expression.					
Lyophilized powder					
CAMSAP1					
Alternative Names Calmodulin-regulated spectrin-associated protein 1					
Entrez Gene 157922 (Human)					
vissProt Q5T5Y3 (Human)					
> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solidphase extraction. The annealed RNA duplex is further analyzed by massspectrometry to verify the exact composition of the duplex. Each lot is compared tothe previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.ComponentsWe offers pre-designed sets of 3 different target-specific siRNA oligo duplexes ofhuman CAMSAP1 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes					
			can be transfected individually or pooled together to achieve knockdown of the		
			target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
