Description siRNA to inhibit OR5M1 expression using RNA interference		
OR5M1 siRNA (Human) is a target	-specific 19-23 nt siRNA oli	go duplexes designed to
knock down gene expression.

Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure		
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid		
phase extraction. The annealed RN	NA duplex is further analyze	ed by mass
spectrometry to verify the exact composition of the duplex. Each lot is compared to		
the previous lot by mass spectrom	etry to ensure maximum lo	ot-to-lot consistency.
We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of		
human OR5M1 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes		
can be transfected individually or	pooled together to achieve	knockdown of the
target gene, which is most commonly assessed by qPCR or western blot.

DEPC Water	1 ml x 1	1 ml x 2

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
