iption siRNA to inhibit C8orf58 expression using RNA interference		
C8orf58 siRNA (Human) is a t	arget-specific 19-23 nt siRNA olig	o duplexes designed
to knock down gene expressi	on.	
Lyophilized powder		
Gene Symbol C8orf58		
Uncharacterized protein C8orf58		
541565 (Human)		
Q8NAV2 (Human)		
> 97%		
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure		
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid		
phase extraction. The anneal	ed RNA duplex is further analyze	d by mass
spectrometry to verify the exact composition of the duplex. Each lot is compared to		
the previous lot by mass spe	ctrometry to ensure maximum lo	t-to-lot consistency.
Components We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of human C8orf58 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes		
target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
