### **RPLPO siRNA (Mouse)**

Catalog # Source Reactivity Applications   CRM0240 Synthetic M RNAi   Description siRNA to inhibit RPLP0 expression using RNA interference   Specificity RPLP0 siRNA (Mouse) is a target-specific 19-23 nt siRNA oligo duplexes designed to knock down gene expression.   Form Lyophilized powder   Gene Symbol RPLP0   Alternative Names ARBP; 60S acidic ribosomal protein P0; 60S ribosomal protein L10E   Entrez Gene 11837 (Mouse)   SwissProt P14869 (Mouse)   Purity > 97%   Quality Control Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.   Components We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of mouse RPLP0 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes can be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot. Negative Control	2.5 nmol x 1	2.5 nmol x 2
DEPC Water	1 ml x 1	1 ml x 2

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
