| Quality Control Oligonucleotide synthesis is monitored base by base through trityl a | | | igh trityl analysis to ensure | | |
| | appro | appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid | | | |
| | phase | extraction. The annea | led RNA duplex is further ana | lyzed by mass | |
| | spectr | ometry to verify the ex | kact composition of the duple | x. Each lot is compared to | |
| | the pr | evious lot by mass spe | ctrometry to ensure maximur | n lot-to-lot consistency. | |
| Components | We of | We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of | | | |

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
