Description siRNA to inhibit FAM50A expression using RNA interference					
FAM50A siRNA (Mouse) is a target-specific 19-23 nt siRNA oligo duplexes designed					
to knock down gene expression.

Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid					
phase extraction. The annealed RNA duplex is further analyzed by mass					
spectrometry to verify the exact composition of the duplex. Each lot is compared to					
the previous lot by mass spectrometry to ensure maximum lot-to-lot consistency.					
We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of					
mouse FAM50A gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes can be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
