Quality Contr	ol Oligor	Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure			
	appro	priate coupling effici	ency. The oligo	is subsequently puri	fied by affinity-solid
	phase	extraction. The anne	ealed RNA dup	lex is further analyzed	d by mass
	spectr	rometry to verify the	exact compos	ition of the duplex. Ea	ich lot is compared to
	the pr	revious lot by mass sp	pectrometry to	ensure maximum lot	-to-lot consistency.
Components	We of	We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of			
	mouse	mouse MTMR6 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes			
	can be	can be transfected individually or pooled together to achieve knockdown of the			
	target	target gene, which is most commonly assessed by qPCR or western blot.

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
