| Quality Contr | ol Oligor | Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure | | | |
| appropriate coupling | | | ng efficiency. The oligo is subsequently purified by affinity-solid | | |

Directions for Use

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250 μ l of DEPC water to get a final concentration of 20 μ M.
